DETAILED ACTION

Election/Restrictions

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-3, drawn to a bacterium with enhanced activity of SEQ ID NO: 3 and 5, classified in class 435, subclass 252.33.
- II. Claims 4-14, drawn to methods for producing L-amino acids using the bacterium of group I, classified in class 435, subclass 106.
- III. Claims 15-17, drawn to a bacterium with enhanced activity of SEQ ID NO: 11, classified in class 435, subclass 252.33.
- IV. Claims 18-22, drawn to methods for producing L-amino acids using the bacterium of group III, classified in class 435, subclass 106.
- V. Claims 23-25, drawn to a bacterium with enhanced activity of SEQ ID NO: 15,classified in class 435, subclass 252.33.
- VI. Claims 26-30, drawn to methods for producing L-amino acids using the bacterium of group V, classified in class 435, subclass 106.

The inventions are distinct, each from the other because of the following reasons:

Inventions I and II are related as product and process of use. The inventions can be shown to be distinct if either or both of the following can be shown: (1) the process for using the product as claimed can be practiced with another materially different product or (2) the product as claimed can be used in a materially different process of using that product (MPEP

§ 806.05(h)). In the instant case L-amino acids can be produced by the fermentation of Coryneform bacteria.

Inventions I and III are related as products. The claims of Invention I are drawn to a bacterium with enhanced activity of SEQ ID NO: 3 and 5, while the claims of Invention III are drawn to a bacterium with enhanced activity of SEQ ID NO: 11. The inventions are patentably distinct products because they are made by different methods and because they are physically and functionally distinct chemical entities with no common core structure.

The products of Invention I are separate and distinct from the methods of Invention IV, wherein the products of Invention I may neither be made by nor used in the methods of Invention IV. In the instant case, the claims of Invention I are drawn to a bacterium with enhanced activity of SEQ ID NO: 3 and 5, while the claims of Invention IV are drawn to methods for producing L-amino acids using a bacterium with enhanced activity of SEQ ID NO: 11.

Inventions I and V are related as products. The claims of Invention I are drawn to a bacterium with enhanced activity of SEQ ID NO: 3 and 5, while the claims of Invention V are drawn to a bacterium with enhanced activity of SEQ ID NO: 15. The inventions are patentably distinct products because they are made by different methods and because they are physically and functionally distinct chemical entities with no common core structure.

The products of Invention I are separate and distinct from the methods of Invention VI, wherein the products of Invention I may neither be made by nor used in the methods of Invention VI. In the instant case, the claims of Invention I are drawn to a bacterium with enhanced activity of SEQ ID NO: 3 and 5, while the claims of Invention VI are drawn to methods for producing L-amino acids using a bacterium with enhanced activity of SEQ ID NO: 15.

The products of Invention III are separate and distinct from the methods of Invention II, wherein the products of Invention III may neither be made by nor used in the methods of Invention II. In the instant case, the claims of Invention III are drawn to a bacterium with enhanced activity of SEQ ID NO: 11, while the claims of Invention II are drawn to methods for producing L-amino acids using a bacterium with enhanced activity of SEQ ID NO: 3 and 5.

Inventions II and IV are related as methods. The methods are distinct from one another because they have different goals as evidenced by different method steps (cultivating bacteria with enhanced activity of SEQ ID NO: 3 and 5; cultivating bacteria with enhanced activity of SEQ ID NO: 11) and have different final outcomes. Consequently, each method is distinct from the other.

The products of Invention V are separate and distinct from the methods of Invention II, wherein the products of Invention V may neither be made by nor used in the methods of Invention II. In the instant case, the claims of Invention V are drawn to a bacterium with enhanced activity of SEQ ID NO: 15, while the claims of Invention II are drawn to methods for producing L-amino acids using a bacterium with enhanced activity of SEQ ID NO: 3 and 5.

Inventions II and VI are related as methods. The methods are distinct from one another because they have different goals as evidenced by different method steps (cultivating bacteria with enhanced activity of SEQ ID NO: 3 and 5; cultivating bacteria with enhanced activity of SEQ ID NO: 15) and have different final outcomes. Consequently, each method is distinct from the other.

Inventions III and IV are related as product and process of use. The inventions can be shown to be distinct if either or both of the following can be shown: (1) the process for using the

product as claimed can be practiced with another materially different product or (2) the product as claimed can be used in a materially different process of using that product (MPEP § 806.05(h)). In the instant case L-amino acids can be produced by the fermentation of Coryneform bacteria.

Inventions III and V are related as products. The claims of Invention III are drawn to a bacterium with enhanced activity of SEQ ID NO: 11, while the claims of Invention V are drawn to a bacterium with enhanced activity of SEO ID NO: 15. The inventions are patentably distinct products because they are made by different methods and because they are physically and functionally distinct chemical entities with no common core structure.

The products of Invention III are separate and distinct from the methods of Invention VI. wherein the products of Invention III may neither be made by nor used in the methods of Invention VI. In the instant case, the claims of Invention III are drawn to a bacterium with enhanced activity of SEQ ID NO: 11, while the claims of Invention VI are drawn to methods for producing L-amino acids using a bacterium with enhanced activity of SEO ID NO: 15.

The products of Invention V are separate and distinct from the methods of Invention IV, wherein the products of Invention V may neither be made by nor used in the methods of Invention IV. In the instant case, the claims of Invention V are drawn to a bacterium with enhanced activity of SEQ ID NO: 15, while the claims of Invention IV are drawn to methods for producing L-amino acids using a bacterium with enhanced activity of SEQ ID NO: 11.

Inventions IV and VI are related as methods. The methods are distinct from one another because they have different goals as evidenced by different method steps (cultivating bacteria with enhanced activity of SEQ ID NO: 11; cultivating bacteria with enhanced activity of SEQ ID

NO: 15) and have different final outcomes. Consequently, each method is distinct from the other.

Inventions V and VI are related as product and process of use. The inventions can be shown to be distinct if either or both of the following can be shown: (1) the process for using the product as claimed can be practiced with another materially different product or (2) the product as claimed can be used in a materially different process of using that product (MPEP § 806.05(h)). In the instant case L-amino acids can be produced by the fermentation of Coryneform bacteria.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art because of their recognized divergent subject matter, restriction for examination purposes as indicated is proper.

The examiner has required restriction between product and process claims. Where applicant elects claims directed to the product, and a product claim is subsequently found allowable, withdrawn process claims that depend from or otherwise include all the limitations of the allowable product claim will be rejoined in accordance with the provisions of MPEP § 821.04. Process claims that depend from or otherwise include all the limitations of the patentable product will be entered as a matter of right if the amendment is presented prior to final rejection or allowance, whichever is earlier. Amendments submitted after final rejection are governed by 37 CFR 1.116; amendments submitted after allowance are governed by 37 CFR 1.312.

In the event of rejoinder, the requirement for restriction between the product claims and the rejoined process claims will be withdrawn, and the rejoined process claims will be fully examined for patentability in accordance with 37 CFR 1.104. Thus, to be allowable, the rejoined claims must meet all criteria for patentability including the requirements of 35 U.S.C. 101, 102, 103, and 112. Until an elected product claim is found allowable, an otherwise proper restriction requirement between product claims and process claims may be maintained. Withdrawn process claims that are not commensurate in scope with an allowed product claim will not be rejoined. See "Guidance on Treatment of Product and Process Claims in light of In re Ochiai, In re Brouwer and 35 U.S.C. § 103(b)," 1184 O.G. 86 (March 26, 1996). Additionally, in order to

retain the right to rejoinder in accordance with the above policy, Applicant is advised that the process claims should be amended during prosecution either to maintain dependency on the product claims or to otherwise include the limitations of the product claims. Failure to do so may result in a loss of the right to rejoinder. Further, note that the prohibition against double patenting rejections of 35 U.S.C. 121 does not apply where the restriction requirement is withdrawn by the examiner before the patent issues. See MPEP § 804.01.

Page 7

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Brian J. Gangle whose telephone number is (571) 272-1181. The examiner can normally be reached on M-F 8-4:30.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Lynette Smith can be reached on (571) 272-0864. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
